Fall 1984

Thanks to you, it's working!

I'm delighted to report that this has been a record-breaking year for the Community Fisheries Involvement Program (CFIP).

We've funded 95 projects so far this year — more than double the number of the previous year! Thanks to you, it's working!

Across Ontario, fishing clubs, community associations, schools — and even boy scouts — are becoming involved in improving the province's fisheries resource.

Fish habitat in streams, rivers and lakes is looking better than ever — and fish populations are increasing. To give you an idea of the wide variety of CFIP projects taking place across Ontario, we've included at the back of this newsletter a list of all projects funded so far in the 1984/85 fiscal year.

I'd like to thank all CFIP participants for the work you've done to improve Ontario's fishery resource. Your dedication, hard work and enthusiasm is an inspiration to fishing clubs and others across this province.

Best wishes for the holiday season and I look forward to your continued support in the New Year.

Art Holder
Director, Fisheries Branch

Habitat Improvement — Giving Fish a Better Home

So far in this third year of CFIP, we've funded a record number of 95 projects across Ontario. That's a big jump from 36 projects last year, and 22 in our first year.

Half of this year's projects involve habitat improvement — such as stabilizing stream banks to prevent erosion, and placing boulders, cobblestones and gravel in streams to develop feeding and spawning areas.

The other half of this year's projects involve egg culture work and fish stocking.

In the future, we'd like to see all groups — even those doing egg culture work and fish stocking — involved in habitat improvement.

As you know, habitat improvement is essential to ensure the future of our fisheries.

Fish culture and stocking are good short-term solutions. But, to be as effective as possible, they must be coupled with long-term strategies — habitat improvement.

Providing fish cover in the Sydenham River. Volunteers are creating instream cover for trout by staking down a wooden raft under which trout can hide.

Talk to us — we can help you plan your CFIP project

Before you apply for CFIP funding, it's a good idea to take the time to plan the project properly.

Lately, we've had to turn down or delay many requests for funding because of problems with the applications. In some cases, the costs for materials have been unrealistically high. In other cases, the design of the project is so poor that it is certainly doomed to failure.

But don't despair — we're here to help. If you plan to apply for CFIP funding, sit down with our district people and come up with a realistic and workable plan. Gather some reliable cost estimates for materials. Plan your project thoroughly. This kind of planning will likely mean faster approval and fewer disappointments in future.

And the winner is . . . Lake Huron Fishing Club — Our Club of the Season

As far as we're concerned, all CFIP groups are tops in our books. But one, we think, was especially outstanding this season.

As of mid-October, the Lake Huron Fishing Club still needed another 20,000 chinook salmon eggs to meet the target of 60,000 for its incubation box. Club members decided that any surplus eggs — over and above the 20,000 — would be offered to the Sault and District Anglers Association, to help that group start up its salmon project.

When the time came to gather the eggs, they managed to collect only 24,000. Instead of sending a mere 4,000 eggs to the group in the Sault, they decided to send them the whole batch. That way, they figured, the Sault association would have a good opportunity to get some hands-on experience this year.

Hats off to president Keith Mombourquette and all members of the Lake Huron Fishing Club for their nice gesture. Because of their generosity, we're calling them our Club of the Season. No prize goes along with this title — just lots of appreciation and thanks!

Everything you ever wanted to know about walleye

In the winter of 1985, CFIP groups involved in walleye projects will receive a package of useful information on this species. The information will include a detailed description of rehabilitation and culture techniques, as well as biological information about walleye.

Removing walleye fingerlings from a rearing pond off Georgian Bay are members of the Pointe au Baril Fish Hatchery Association.

Want to know more about warmwater and lake fish? Help is on its way

A biologist is now working on part two of that manual you all know and will appreciate — the CFIP Field Manual.

This manual will deal with rehabilitation techniques for warmwater and lake dwelling fish species. It should be completed in the winter of 1985/86.

Tell us what you're doing!

We recently sent a letter to all clubs involved in CFIP projects, asking for information on your projects for this newsletter.

We'd like to thank The Porcupine Rod and Gun Club for the following submission which prompted the request:

Smallmouth Bass Introduction

The Porcupine Rod and Gun Club is attempting to introduce smallmouth bass to the Timmins area. This past summer, approximately 40,000 fry were transferred from Lake Middleton near Matachewan to Star Lake, near Timmins. This is the extreme northern limit for smallmouth bass. It is hoped that there will be a fishable stock in three to five years.

GOVT

Fall 1985

Issue No. 4

A Message from the Minister of Natural Resources

Year Four: And Still Going Strong!

I am pleased to announce this is our fourth successful year for the Community Fisheries Involvement Program (CFIP).

CFIP accomplishments are impressive: by the end of 1984 more than 5,500 metres of stream had been improved, more than 14,000 square metres of spawning bed had been created or improved, more than 5,400,000 fry of varying species had been produced and more than 200,000 fingerlings had been raised. Our thanks to all the enthusiastic participants who built this solid foundation for the program, and made its future secure.

I would also like to welcome the 25 new participants in this year's CFIP program. I am confident they will have a rewarding experience.

A list of projects approved to date in the 1985/86 fiscal year has been included in the newsletter to give you an idea of the variety and location of CFIP projects across Ontario.

We are looking for some feedback about the program and have included a questionnaire in this issue. We need your ideas and comments to make a good program even better!

Best wishes for the holiday season and I look forward to your continued support in the future.

Hon. Vincent G. Kerrio
Minister of Natural Resources

Vince Kerrio discussing the improvements for spawning salmon and rainbow trout in the Sydenham River with Os McArthur.

Group of the Season— Sydenham Sportsmen's Association

Selecting the Group of the Season was difficult. However, recognition to the Sydenham Sportsmen's Association is long overdue.

Improving Ontario's sport fisheries is not new to members of this group. In fact, their stream work began in the late 1950s, well before CFIP was ever dreamed about. Even then, a young man in his forties, Os MacArthur, a longtime club member, realized that streams and fish need a helping hand. The first few years were spent on the upper Sydenham River and Spey River stabilizing streambanks and providing cover for the resident brown and brook trout. It was a time of learning for everyone.

Then, for almost 15 years little was done—until the late 1960s when the group began improving spawning areas. This work continued through the 1970s. With each year of added experience and with more and more fish returning to the improved spawning areas, the club members knew they were on the right track.

With the introduction of CFIP in the early 1980s, the club had a source from which to obtain additional funds for its projects. Since then, the club's aquatic habitat projects have become more numerous and larger in scope. And most important, fish have been returning to the spawning areas in even greater numbers.

While continuing their work on improving habitat in the Sydenham and other streams of the Owen Sound area, many club members felt it was time to improve the lake sport fishery. Taking up this challenge, the club now boasts two efficient mini-hatcheries—one for brown trout and the other for chinook salmon.

Efforts to improve the lake fishery have now culminated with the completion of an artificial spawning channel for migrating salmonids. This channel is 370 metres in length and, to say the least, is very impressive. It is intended for migratory species of chinook, rainbow and brown trout from Georgian Bay.

To all members of the Sydenham Sportsmen's Association: Thanks for many years of good, hard and enthusiastic work.

Ron Laberge, a member of the Sydenham's Sportsmen's Association helping other members of the Owen Sound Club build a small dam to control water flowing into a newly made spawning channel for salmon and rainbow trout in a side channel of the Sydenham River.

Redden's Redds

Last winter Lorne Redden of Redden's Camp, Longbow Lake (Kenora) got involved with a walleye spawning substrate improvement project. Longbow Lake had provided good catches of walleye in the past, but catches had declined. Lorne decided to do something about it before the problem became worse, and consulted with Ministry staff. It was decided that the best approach was to improve upon the existing spawning areas and also try to build a couple of new ones.

In February, roads were plowed on the lake to the predetermined sites and approximately 300 cubic metres of rocks from 4 to 12 inches in diameter (10 to 30 cm) were hauled and placed on the ice.

We are pleased to report that in the spring spawning walleye used both the improved sites and the newly created ones. Let's hope that the trend continues and that we can look forward to better fishing on Longbow Lake in years to come.

Good work, Lorne!

Buddies, Big Brothers and Bass

In June, 1985, the Chelmsford Fish and Game Association (near Sudbury, Ontario) organized a weekend camp-out for club members and also for participants from the Big Brothers Association. Their purpose was to angle for smallmouth bass in Bass Lake, place the fish in oxygenated tanks and transfer them to Whitewater Lake, approximately 33 kilometres away.

On the first outing, 60 bass were caught and transferred and, on a following occasion, 60 more fish were transported. According to recent reports, healthy adult smallmouth bass are now being seen and caught in Whitewater Lake.

Through the participation of Big and Little Brothers, and the support of the Chelmsford Fish and Game Association, a stable smallmouth bass population in Whitewater Lake may soon be realized.

Rip-Rap, Brush Bundles and Digger Logs

Trout Unlimited, Huronia Chapter, tackled a major rehabilitation project on Bear Creek (near Barrie, Ontario) in August, 1985. One hundred and ten tons of limestone, in addition to numerous brush bundles and digger logs, were strategically placed along the creek. These rehabilitative efforts provided streambank protection and substantially narrowed the stream to increase water flow. Natural spawning stone began to appear almost as soon as the project was completed.

Equally impressive was the number of chapter members contributing to the project's success—more than 30 people (coming from places as far as Peterborough and Orangeville) each provided as much as six hours of hard manual labour. This is a commendable effort by the Trout Unlimited, Huronia Chapter.

Trout Unlimited (Huronia Chapter) putting finishing touches to some bank rip-rap on Bear Creek near Barrie, Ontario.

Rainbow Rebound

The Ontario Steelhead Salmon Fishermen (OSSF), in conjunction with the Dofasco Angling Club (DAC) have established three upwelling incubation boxes in the Saugeen River. In 1985, 210,000 eggs were collected and placed in these boxes. The expected hatch rate is 80 per cent, which suggests an estimated 168,000 fry should be available for placement in the Saugeen River this year. Through the cooperative efforts of OSSF and DAC, the future of the rainbow trout fishery in the Saugeen River looks bright!

Walleye Yearlings— After 15 Years!

In 1984, the Lang Lake Fish Planting Committee (LLFPC), Espanola, Ontario, operated a jar hatchery to produce walleye fry for stocking into Lang Lake. in 1985, one million pickerel eggs were placed in jars in the group’s new hatchery building. A hatching success rate of 70 per cent was achieved in May, 1985. Half the fry were released directly into the lake; the rest were left to grow to the fingerling stage.

Some 11 pickerel, ranging from 23 to 28 centimetres in length, were caught this summer in Lang and Plunge lakes. Local MNR biologists, through scale examination, confirmed these fish were from the 1984 plantings. This is the first time in 15 to 20 years that catches of walleye yearlings were reported in Lang Lake! With additional efforts by the LLFPC in 1985, there is potential for a successful walleye fishery in Lang Lake.

CFIP Three Year Review

	1982	1983	1984

Comments:

5 Is your project well-known and receiving support in the community? Yes No
☐ ☐

6 Was a summary report of the completed work prepared and forwarded to the District Office? Yes No
☐ ☐

7 Are you receiving the Community Clips Newsletter? Yes No
☐ ☐

Do you find Community Clips useful? Yes No
☐ ☐

If not, how can we improve?

8 Would you generally rate the program as
i) very successful ☐
ii) moderately successful ☐
iii) needs improvement ☐

9 How do you feel the program can be improved? If necessary, please attach extra pages.
